

### Make More Putts

If your relationship with your putter is like a marriage, stop reading now to avoid temptation. However, answering this Siren's call turns wonder when you take a Cure RX putter to the putting green.

Form follows function at Cure Putters. With a high MOI, lower lofts, adjustable weighting system, and Triangulation Alignment, this flat stick gets the ball rolling better than any putter we have tested this season. By adjusting the putter's weight and lie angle, a golfer's hands flow naturally, not on a path prescribed by the standardized lie angle on putters purchased off the rack.

Get one in your hands and enjoy the honeymoon. Keep its head covered; you will be seeing a lot of each other over the next decade. The Cure RX series putters are CNC milled from a solid block of T-6160 aircraft grade aluminum and 100% made and assembled in the USA.

### The Magic Touch

"What do I got?" If you are asking this question on the course, then you are annoying your playing partners. Stop the helpless behavior and get the new SkyCaddie Touch. There are over 35,000 preloaded courses, and the free SKYGolf 360 mobile app allows users to track their game stats, chat with friends, and stay in tune with the latest news from the golf industry. At participating courses, you can even reserve your next tee time. Touch has a glove-friendly, high-definition, sunlight-readable screen. SKY Caddie Touch provides more features than an app on your phone, and it will push your game to a new level of understanding.

### Learning Curve

Golf is played with the hands. Sometimes, we stray from the simple fact that our hands move the handle to produce a golf shot. DST Compressor clubs created a training aid that shows and ingrains the proper position of the hands at impact.

Golfers cannot cheat with the DST Compressor. The unique, curved shaft will not produce a clean strike without a proper pivot and hand positioning. Feedback with the DST Compressor mirrors what you see on the course. If your hands lag behind the club head, then you will look like a hacker. The DST Compressor will not cure all of the movements that lead to impact; however, with the help of an IPGA professional, this club will add focus to your practice sessions.

### Bang for Less Bucks

The new Bazooka 460 Black driver shatters the price point for big sticks. Retailing for \$119.99 with a lifetime warranty, 460 Black takes the Batavia-based company back to its Bazooka roots. For many golfers, the right-priced Bazooka woods were the first upgrade we made to our hand-me-down golf set.

Added features are the black finish and 'camo' design highlights on the club head. Very cool. The 460 Black offers a lightweight shaft (50 to 57 grams) and has six shaft/loft options for men, seniors, and women.

### Style Points

It is high time to bump a few of those ol' golf shirts to the curb. As we make the turn toward the back nine of our golf season, here are a few apparel options to add a little panache to your game.

The Sanders Shorts from Oakley (\$70) provide a four-way stretch fabric that never restricts your range of motion. These lightweight shorts with O Hydrolix technology are the perfect complement to today's modern performance shirts; especially Oakley's Newlyn polo shirt (\$70), which has an ergonomic fit, but looks good on bodies that don't frequent the gym. Both items are available at the Oakley Store at Water Tower Place in Chicago.

The Triumphant Collection from AUR brings a fresh palette of colors to your closet. With a selection that includes Sunglo Yellow, Neptune Blue, and White, you will command attention when you step to the tee box. AUR's Sparewood polo (\$60) offers Active-Stretch technology to ensure freedom of movement throughout your swing.
